

REEZOLV

AUDIOVISUAL SPECIALISTS

Who we are: our services

Reezolv offers **sound engineering & light techniques** for concerts, parties and conferences.

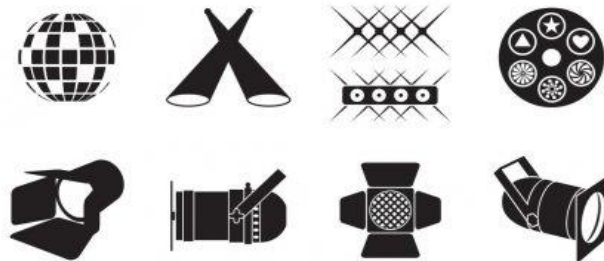

Who we are: our scope

We're a very dynamic company based in Ghent, Belgium. We provide services to companies, associations and individuals across the Benelux.

Whether you're trying to organise a small debate or a live concert, we can provide equipments that are adapted to the size of your event.

Our focus ranges between very small conferences to festivals of 500 spectators.

What we provide: digital mixing consoles

With our mixing consoles, your sound and light effects are in good hands.

Our sound consoles offer up to 48 input channels, while our light consoles have a maximum of 1024 DMX channels.

What we provide: microphones

We provide top brand microphones, both wired and wireless. The Ultra High Frequency on our microphones reduces the probability of interference.

With a range of Shure and Sennheiser microphones, feedback is completely out of the question!

What we provide: sound set

For a show to be successful, it's important to have a good mix of sound. Speakers play an important role in providing high quality sound.

Our Martin Mach Slingshot set, which provides a total power of more than 5000 Watt, is guaranteed to have your audience wanting more.

What we provide: moving heads

Our moving heads are ideal to lighten up your live event, and give it that extra touch that it needs.

The Martin Mac 700 and the Martin Mac 300 produce a wide variety of colors and effects for both internal and external use.

What we provide: LED spots

To illuminate the top of a truss and to draw your audience's attention, you need to have good LED spots.

The Showtec Spectral product range has reliable fixtures which are added to almost every light show at any event or festival.

What we provide: profile spotlight

What is a live show without a proper spotlight on the lead singer? How can a presentation be given without a zoom spotlight on the presenter?

The ETC Source Four JR is known for its low power consumption and bright light. Ideal for a great stage focus, with a zoom profile ranging between 20° and 50°.

What we provide: fog machine

There's no live show without a fog machine. We provide very powerful machines that make the artists almost "invisible" on stage.

A great show requires attractive smoke. We provide fog machines that can be controlled via DMX.

What we provide: aluminium truss

Our Eurotruss range is designed to bring out the beauty of fixtures such as spots, moving head, stage projectors, etc.

What we provide: video projectors

During a conference/debate, a presentation requires great projection. Our projectors have a minimum of 3000 lumens, to provide a clear image of the slideshow.

What we provide: stage monitors & stands

A performing artist needs to have an overview of information during a live show. Monitors are a great solution. They can be connected to computers, in order to project lyrics, time, messages, and other info.

Our monitors have stands that keep them fixed on stage, which offer more reliability.

How to contact us

You can reach us :

- On the phone: **+32 483 423 998** (Mon – Sat, 08:00 – 20:00)
